Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-13, drawn to methods for the recovery of nucleic acid, classified in class 536, subclass 25.41.
- II. Claims 14 and 15, drawn to an apparatus for the recovery of nucleic acids comprising means for mixing, contacting, isolating, washing and eluting nucleic acids, classified in class 435, subclass 286.7.

The inventions are distinct, each from the other because:

Inventions of Group I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process for recovery of nucleic acid can be performed by hand using column chromatography or binding of nucleic acids within Eppendorf tubes using glass beads.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper. Also, because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
